SharePoint Intake Artifacts: EDA

Summary

Of 782 ERs, 117 (15%) have a top-level "Finalized Artifacts" folder, and 102 (13%) have usable (in-scope) documents in it.

Part 1 is a short corpus overview showing how this set is selected. Part 2 analyses the Finalized Artifacts ERs in full.

- **Finalized Artifacts ERs:** 117 ERs with a top-level Finalized Artifacts folder, 102 of them with usable files. 609 files in total, 310 usable; a median of 2 usable files per ER.
- **File types:** presentations are 60% of usable files. Excel is 46% of all Finalized files and is excluded.
- **Tokens:** median 4,421 per ER and 90th percentile 15,288, measured on every file; 5 ERs (4.3%) exceed the 24K limit.
- **Images:** 96.5% of usable files contain embedded images; median 36 images per ER.
- **Cards:** Idea Cards appear by name in 10 ERs; at least 87% have no card by name.

Part 1: Corpus overview

Scope

The EDA covers the 02 Intake Artifacts SharePoint library, where each top-level folder is one ER (Planview Work Entry). In-scope document types follow the business guidance.

	Document types
Needed	Value Card / Value Case (replaces Idea Card), Candidate Architecture (CA), Data Architecture (DA), supporting files such as kickoff slides and notes, including images
Not needed	Gate 0 and Gate 1 estimate workbooks (ClassicHEM / SlimHEM), Stakeholder Engagement Workbook, Bill of Materials (BOM), all Excel files

The EDA was done in two steps:

1. **Metadata inventory (every file in all 782 ERs):** listed the name, type, size and folder of every file, without opening any file. Part 1 is based on this.

2. **Full content analysis (Finalized Artifacts ERs):** opened every in-scope file in the 117 ERs with a top-level Finalized Artifacts folder (310 files) to measure text, tokens and images. Part 2 is based on this. No sampling was used.

How the Finalized Artifacts ERs are selected

Measure	Value
ERs in the library	782
ERs with at least one file	734
Files	4,199 (19.6 GB)
ERs with a top-level Finalized Artifacts folder	117 (15%)
ERs with usable files in Finalized Artifacts	102 (13%)

A file counts only if it sits in a "Finalized Artifacts" folder directly inside the ER folder. The rest of this report covers only these ERs.

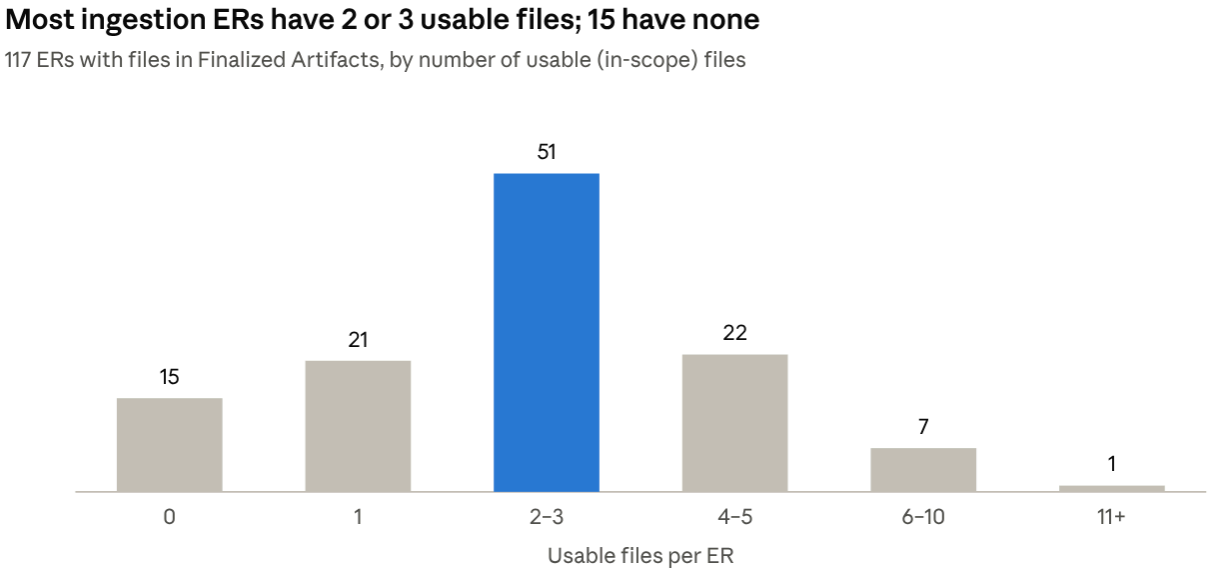

Part 2: Deep dive on Finalized Artifacts ERs

117 ERs have files in a top-level "Finalized Artifacts" folder; 102 of them have usable documents, with a median of 2 usable files per ER (average 2.65) and a median of 4,421 tokens per ER (average 6,163).

Measure	Value
ERs with files in `<ER>/Finalized Artifacts`	117 (15% of 782)
ERs with in-scope files there	102 (13%)
ERs with only excluded files	15
Files in Finalized Artifacts	609
In-scope files	310 (51%)

Files per ER (across all 117 ERs, including the 15 with none usable)

	Mean	Median	90th percentile	Max
All files	5.2	5	9.4	21
Usable files	2.65	2	5	17

eda4_finalized_ers.csv · 117 ERs, strict Finalized Artifacts rule

File types

Category	Files	In scope
Excel	282	No
Presentations	187	Yes
PDF	61	Yes
Email	35	Yes
Templates and gate estimates	17 (9 + 8)	No
Word	14	Yes
Other	11	Yes
Images	2	Yes

Excel is the largest single type (46% of Finalized files) and is excluded. Presentations make up 60% of usable files.

Tokens (text only, every in-scope file measured)

Mean	Median	90th percentile	Max	ERs over 24K
6,163	4,421	15,288	30,985	5 (4.3%)

Tokens are counted with tiktoken `cl100k_base` on extracted text. Image content is not included.

Images (embedded in .pptx, .docx and .pdf files)

- 11,895 images in total; 251 of 260 image-capable files (96.5%) contain at least one.
- Per ER: median 36, mean 102, 90th percentile 210.
- These are raw counts, before removing small or duplicate images such as logos.

Value and Idea Cards (by file name)

Name pattern	Files	ERs
Idea Card	11	10
Value Card	6	5
Value Case (reference)	6	5

Value Card and Value Case return identical counts, which suggests one pattern is matching the other's files; confirm before relying on the Value Card figure. Either way, at least 102 of the 117 ERs (87%) have no card by name.

Extraction failures: 16 files (10 ZIP, 2 PDF, 2 PPTX, 1 DOC, 1 OneNote).

Key observations and open questions

1. **Excluded types are half the Finalized content.** Excel, Gate estimates and templates are 299 of the 609 Finalized files.
2. **Most ERs fall well under 24K tokens.** 5 ERs (4.3%) exceed it; the largest has 30,985.
3. **Images are nearly universal.** 96.5% of usable files contain embedded images. How image content is handled is an open question.
4. **Value cards can't be identified reliably by file name.** Idea Cards appear in 10 ERs, and the Value Card count is unconfirmed. Matching content against the Value Case template is an option once more examples arrive.
5. **Open question: should subfolders inside Finalized Artifacts be included?** To confirm with the business.
